The InLine® PoE+ Gigabit Network Injector Hub is a fast and flexible solution for upgrading the existing network to Power over Ethernet according to IEEE 802.3af / IEEE 802.3at without replacing existing switches. The injector hub provides triple protection against overcurrent, overvoltage and overheating at each port. In addition, the Injector Hub offers both IEEE 802.3af PoE and IEEE 802.3at PoE+ with up to 30 watts of power per port via a single Cat. 5 / 5e / 6 Ethernet cable with a combined total power of 120 watts (240 watts via power terminal block). Eight 10/100/1000MBit/s PoE+ ports solve the problem of a limited number of available sockets and offer system administrators a flexible solution for operating the network device to be supplied with power, such as PoE-capable IP cameras or wireless access points, almost everywhere.
