Installation

You can install the solar panel on the wall or ceiling.

CAUTION: As an alternative charging equipment, the power amount generated by this solar panel may be affected by its actual surrounding environment, mainly the intensity of sunlight and the time length of illumination. If the battery camera is running out of power soon, please bear it in mind that this solar panel alone cannot ensure the camera remains in working status.

1. Install the bracket

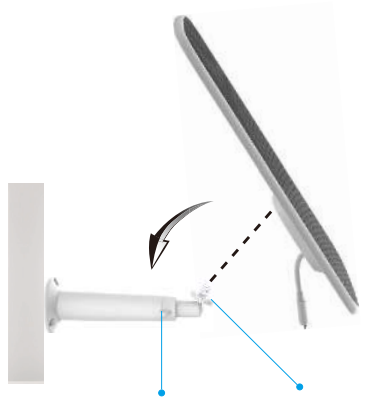

1. Place drill template onto a clean and flat surface.
2. (For the cement wall/ceiling only) Drill screw holes according to the template, and insert anchors.
3. Use three screws to fix the bracket.

When drilling holes for expansion bolts, please make sure that the diameter of the drill head is 5.5mm to 6mm, and that the hole depth is not less than 25mm.

2. Install the Solar Panel

4. Mount the solar panel on the bracket.
5. Tighten the fixing screw.

3. Adjust the Angle

1. Loosen the adjusting screw.
2. Adjust the solar panel angle as your desired place.
3. Tighten the adjusting screw when you have the solar panel in the position you want.

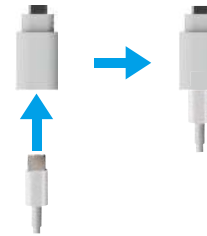

- Please do not place the solar panel completely parallel to the ground to avoid dust or other dirt.
- The solar panel should be tilted to receive maximum solar radiation and the recommended tilt angle is 25°-40°.

4. Charge the Battery Camera

Connect it with EZVIZ battery camera (please ensure that the power port of the battery camera is a Type-C port).

- In accordance with safety and regulatory requirements, the working environment temperature range for battery camera charging should be maintained at 0-45°C.
- Please clean the dust and dirt on the surface of the solar panel in time to avoid affecting the power generation efficiency of it.
- Please visit www.ezviz.com/eu or consult the customer service for the battery camera models suitable for this product.
- For other detailed information, please visit www.ezviz.com/eu.
- It is recommended to use the solar panel with battery cameras with Type-C power port, If not, use with the type-C to micro-USB adapter (included in the package).

INFORMATION FOR PRIVATE HOUSEHOLDS

1. Separate collection of waste equipment: Electrical and electronic equipment that has become waste is referred to as waste equipment. Owners of waste equipment must dispose of it separately from unsorted municipal waste. In particular, waste equipment does not belong in household waste, but in special collection and return systems.
2. Batteries and rechargeable batteries as well as lamps: Owners of waste equipment shall, as a rule, separate waste batteries and rechargeable batteries that are not enclosed in the waste equipment, which can be removed from the waste equipment without being destroyed, from the waste equipment before handing them in at a collection point. This does not apply if waste equipment is prepared for reuse with the participation of a public waste management authority.
3. Options for returning waste equipment: Owners of waste equipment from private households can return it free of charge to the collection points of the public waste management authorities or to the take-back points set up by manufacturers or distributors within the meaning of the Electrical and Electronics Equipment Law. Stores with a sales area of at least 400 m² for electrical and electronic equipment and those grocery stores with a total sales area of at least 800 m² that offer electrical and electronic equipment several times a year or on a permanent basis and make it available in the market are required to take it back. This also applies in the case of distribution using means of distance communication, if the storage and shipping areas for electrical and electronic equipment are at least 400 m² or the total storage and shipping areas are at least 800 m². Distributors shall, in principle, ensure take-back by providing suitable return facilities at a reasonable distance from the respective end user. The possibility of returning waste equipment free of charge exists for distributors who are obliged to take it back, among other things, if a new similar device that essentially fulfills the same functions is delivered to an end user.
4. Privacy Notice: Waste equipment often contains sensitive personal data. This applies in particular to devices of information and telecommunications technology such as computers and smartphones. In your own interest, please note that each end user is responsible for deleting the data on the waste equipment to be disposed of.
5. Meaning of the symbol “crossed-out wheelie bin”: The symbol of a crossed-out wheelie bin regularly depicted on electrical and electronic equipment indicates that the respective device is to be collected separately from unsorted municipal waste at the end of its service life.
