Pica-Ink® Deep Hole Marker

ORIGINAL

Video

PERMANENT

Pica-Ink®

Deep Hole Marker

World's first marker for deep holes

Often copied – never matched

Ideal for spots hard to reach

- Marks on almost all kinds of dry surfaces
- Permanent alcohol-based ink
- Instantly water and abrasion resistant
- Removable from glossy surfaces with alcohol or other usable solvents
- 3 times more marking capacity due to movable and self-adjusting telescopic tip: full use of 7 mm abrasion of the fiber nib, instead of 2 mm

NEW: Extra strong clip

- New quiver cap with reinforced clip for strong and permanent fixation on the trouser pocket: the requirement for perfect one-handed handling.
- Recap firmly after use

Pica-Ink

Deep Hole Marker

The marker with “7 lives”

In daily use of ink markers it might happen that an ink marker like the Pica-Ink runs out of marking, although there is still enough ink in the ink reservoir. Most possible causes are:

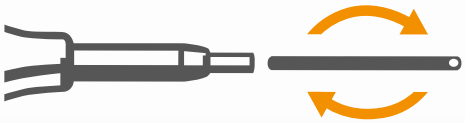

- The writing nib has dried out, because it remained too long uncapped
- The marking nib had contact with water or moisture
- The marking nib had contact with dirt
- The front end of the marking nib is damaged or spliced, as it had been used on too rough surfaces

The movable telescope tip makes several revivals possible – 7 times and more…

Nib wick can be twisted by 180° – the Pica-Ink is immediately ready for use. If the nib wick was spliced at the front end, it can be cut off (1-2 mm) before twisting by 180°. For this purpose, please use a very sharp blade, in order not to deform the fiber nib. The new fiber nib end can even be rounded with a fine sanding paper.

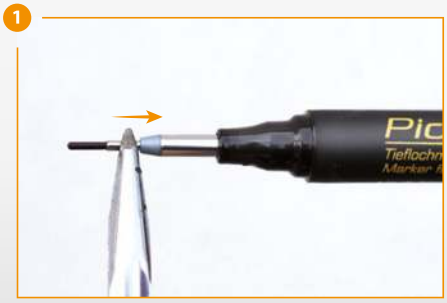

How to do step by step:

1. Move the thin telescopic steel tip back with pincers
2. Tear out the marking nib wick and turn through 180°
3. Insert the nib wick again and move the thin telescopic steel tip forward
