Highlights

Compact and portable

The flosser's compact design has a collapsible reservoir, making it easy to put away or pack on your next trip. The reservoir holds upto 200ml of water, enough for one complete 60-second clean.

Three flossing modes

Tailor any session to your needs with three flossing modes. There's Pulse to massage and stimulate gums. Clean for everyday use. And Sensitive for an extra touch of gentleness in your routine.

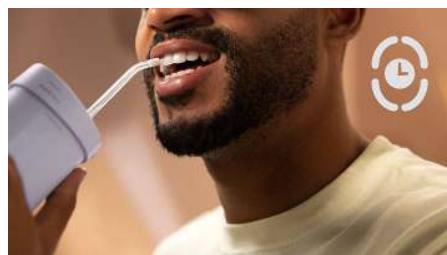

Standard and Comfort nozzles

The flosser comes with two nozzles to remove up to 99.9% of plaque in treated areas*. The N1 Standard nozzle gives a powerful clean between

teeth. While the N2 Comfort nozzle, with its soft tip, has been designed for sensitive gums. Each nozzle can rotate 360 degrees to help you floss hard-to-reach areas, like at the back of your mouth.

15-second pacer

With its 15-second pacer, the flosser will briefly pause waterflow to let you know when its time to move to the next quadrant. It gives your whole mouth the right amount of flossing time, every time.

Rechargeable

With a charge that lasts up to 14 days, the Compact Flosser is super handy on-the-go. You can easily charge it at home before a trip, or top it up while you're away with the USB-A charging cable.

Water-resistant

The Compact Flosser has an IPX7 water-resistance rating, making it truly bathroom friendly.

Nozzle storage

Make the most of the clever design by tucking a nozzle into the channel at the top of the flosser when not in use. The channel doubles as a filling port.

Two filling methods

You can fill the water reservoir easily in two ways. Either remove the reservoir and fill it up like a glass - ideal when it's empty. Or top it up using the filling port near the nozzle attachment.
