

IP Paging Adapter for Traditional Analog Amplifiers

Seamlessly connect legacy paging systems to IP environments with the 8301 IP Paging Adapter. The 8301 is armed with multicasting and scheduling capabilities, making it a valuable resource in hybrid and IP environments.

The 8301 IP Paging Adapter is a SIP endpoint that integrates existing traditional paging infrastructure into a VoIP environment. It emulates a page port similar to what is found on a legacy PBX to connect directly to an analog amplifier, offering a simple and easy interface to a VoIP phone system as a SIP extension and multicast endpoint.

As a 3rd-party, SIP-compliant device, the 8301 is compatible with most leading UC systems. While it is often used to bridge IP to traditional amplifiers, the 8301 also serves to scale IP environments, acting as a multicast sender to other Algo IP endpoints grouped into ones. With wideband audio and an isolated balanced line output, the 8301 can deliver clear, crisp audio to be played over both IP and analog speakers.

A common use for the 8301 is as an advanced scheduler, which can function in both traditional and IP environments. The 8301 can be configured to set timers for bells, automated announcements, or any other tone or usage. With 1 GB of internal memory, any selection of sound can be played by uploading the desired audio file.

The 8301 is easily managed directly via web interface. Paired with an Algo device management tool, the 8301 can assist in monitoring and managing a large number of devices across a single or multiple networks.

FEATURES

- Isolated and balanced line output to eliminate hum / noise to amplifier.
- Wideband HD audio (G.722 voice codec) for high intelligibility speech.
- Secure SIP using TLS and SRTP.
- Configurable via user-friendly web interface or auto-provisioning.
- Customizable audio files for emergency notification and alerting.
- Configure up to 50 page zones.
- PoE powered (IEEE 802.3af).
- Dedicated audio/music input (3.5mm jack).

APPLICATIONS

- Deliver emergency alerting, loud ringing, bell scheduling, and music over legacy technology by integrating a VoIP phone system to traditional analog amplifiers.
- Use hybrid voice paging system by integrating analog speaker infrastructure and multicasting to Algo IP endpoints (speakers, visual alerters, etc.) and to multicast supported IP phones.
- Provide notification alerting for emergency, safety, and security events.
- Use scheduler for bells, tones, and automated announcements for school, retail, and healthcare facilities.
