

Kanguru FlashTrust™

Digitally-Signed Secure Firmware USB 3.0 Flash Drive

The Kanguru FlashTrust™ USB 3.0 flash drive is the world's first unencrypted, USB 3.0 flash drive with onboard, trusted firmware to protect against the potential risk of malicious firmware-based attacks. With its RSA-2048 bit, digitally signed and secured firmware, the Kanguru FlashTrust offers consumers and organizations the same level of protection typically reserved for encrypted, high-end flash drives, to unencrypted USB device users.

The Kanguru FlashTrust is perfect for organizations who may not require the need for high-end hardware encryption but are seeking added protection from any type of "badUSB" malware threat. With its handy physical write protect switch, SuperSpeed USB 3.0 interface, and vast storage space options, the FlashTrust is sure to handle the task, providing plenty of room to store, read, and transport your files in record time.
