5. Hardware Installation

The following section describes the hardware features of POE-172S. Before connecting any network device to them, please read this chapter carefully.

Please refer to the following sections for detailed information about POE-172S.

5.1 Before Installation

Before installation, it is recommended to check your network environment. If there is difficulty in finding a power socket for AC-DC adapter of your non-PoE IEEE 802.3at networked device, the POE-172S provides you with a way out to supply DC power to this Ethernet device conveniently and easily.

1. Please ensure the output voltage is correct for remote device. Otherwise, it will damage your remote device.
2. Don't switch to the DC mode during operation. Otherwise, it will damage your POE-172S and remote device. If you want to change to the DC mode, please plug out the "POE In" cable and wait for 5 seconds until the PWR LED is completely off.

5-2. The POE-172S Installation

Please turn off the POE-172S before you switch to the DC output mode.

1. Select the right DC power output and connect DC plug from **"DC OUT"** of the POE-172S to remote device.

2. Connect standard UTP cable from **"Ethernet"** port of the POE-172S to remote device.
3. Connect standard UTP cable from **"PoE In"** port of the POE-172S to PoE switch/injector.

4. Power on the PoE switch/injector to enable the POE-172S and remote device to be powered.

Note

Please ensure the POE-172S output voltage is correct before applying power to remote device. The POE-172S provides DC12V/19V/24V power output.
