Introduction

Protection Straight from our DNS Cloud

Webroot SecureAnywhere® DNS Protection offers a simple yet effective way to prevent everyday web usage from becoming a major security risk. The DNS Protection management console is directly integrated into the Global Site Manager endpoint security console for MSPs. It appears as a separate option against each client site, and enables administrators to finely tune web access policies using both global and site-

A Simple Service with Sophisticated Intelligence

In particular, DNS Protection's URL filtering is supported by Webroot BrightCloud® Web Classification data. This URL database is the largest of its kind, and the service continually classifies over 600 million domains to update the database in near-real time. Webroot analyzes and categorizes websites at the rate of over 5,000 URLs per second. In fact, Webroot scans the entire IPv4 space and in-use IPv6 addresses and classifies over 95% of the internet at least three times per day. We continually analyze and classify over 4 billion IP addresses, 27 billion URLs and uncover at least 25,000 malicious URLs, 6,000 new phishing sites, and over 100,000 new malicious IP addresses per day. Our threat intelligence services are trusted by over 40 leading network and security vendors worldwide.

Webroot scans the entire IPv4 space and in-use IPv6 addresses to classify over 95% of the internet at least three times per day.

Webroot offers over 82 URL categories to allow service providers to determine the right usage policies for their clients. By leveraging industry-leading Webroot intelligence and services to automatically block malicious websites and filter undesirable website types, you can drastically reduce the number of malware threats that infect your clients' networks and endpoints.

SecureAnywhere DNS Protection at a Glance

- » **Fully Integrated into the Global Site Manager (GSM) Console**
Streamlines management with a single view of all deployments across multiple sites
- » **No Hardware or Software to Install**
Sets up in just minutes within the GSM console to secure clients' corporate and guest networks
- » **Multi-platform Protection**
Secures Windows®, Mac®, Linux, Android®, and iOS® devices connecting to the network
- » **Fast, Easy Deployment**
Simply redirect clients' network configuration to Webroot DNS Protection server IPs, it takes only minutes
- » **Securely Hosted DNS Servers**
Scalable DNS resolver servers provide a secured DNS connection to the internet
- » **Instant Connectivity**
Our DNS Protection service processes 30 billion user requests per second, per node, and we have over 30 nodes.
- » **Low User Latency**
Performs filtering based on domain categorization, not full proxy scans, eliminating latency
- » **Policies by IP, Dynamic IP or both**
Pre-configured Webroot and custom policies protect clients quickly, easily, and effectively
- » **On-demand Drill-down Reporting**
Reports on the threats the network would have been susceptible to without Webroot SecureAnywhere DNS Protection
- » **Customizable User Block Pages**
Use your own or client-specific block pages when end users try to access blocked content
- » **Allow/Block (Whitelist/Blacklist) Support**
Create customize overrides based on clients' specific needs
- » **Preset Policies and Granular filtering options**
Block websites according to 82 specific site categories (Security, Adult, Productivity, etc.)

About Webroot

Webroot delivers next-generation network and endpoint security and threat intelligence services to protect businesses and individuals around the globe. Our smarter approach harnesses the power of cloud-based collective threat intelligence derived from millions of real-world devices to stop threats in real time and help secure the connected world. Our award-winning SecureAnywhere® endpoint solutions and BrightCloud® Threat Intelligence Services protect millions of devices across businesses, home users, and the Internet of Things. Trusted and integrated by market-leading companies, including Cisco, Citrix, F5 Networks, Aruba, Palo Alto Networks, A10 Networks, and more, Webroot is headquartered in Colorado and operates globally across North America, Europe, and Asia. Discover Smarter Cybersecurity™ solutions at webroot.com.

Benefits

Aside from the obvious benefits of a cleaner network, implementing Webroot SecureAnywhere DNS Protection brings:

- » **Better Network Speeds**
By blocking undesirable traffic, such as media streaming, and other unwanted or malicious content at the domain layer, you can drastically improve network bandwidth.
- » **Accurate URL Filtering**
Because DNS Protection uses real-time threat intelligence that is continuously checked and updated, categorizations are always as current and accurate as possible, reducing user support calls.
- » **Higher Overall Malware Efficacy**
By reducing user traffic to malicious or undesirable websites, you significantly reduce the likelihood that clients' endpoints and networks will become infected. Up to 90% less malware is possible.
- » **Lower TCO and Better Margins**
DNS Protection is competitively priced and requires minimal expenditure for operation and delivery, which means better profitability and margins for MSPs. Additionally, the overall reduction in infection rates means MSPs don't have to devote as many man-hours to remediation and other lost productivity costs.
- » **Client Satisfaction & Visibility**
With reduced infection rates and online distractions due to productivity policies, your clients will enjoy significant improvements in user productivity. Clients also gain immediate visibility into overall web usage and threats DNS Protection has prevented.

Easy Trial and Purchase

To set up a trial, simply call your account manager, or complete the contact form on our [website](http://webroot.com). DNS Protection trials are free and unlimited for up to 30 days. DNS Protection is also available for purchase through your normal channels.
