Description

The LevelOne POS-3000 Gigabit High Power PoE Splitter splits a networked PoE signal into separate power and Gigabit data sources. This device allows administrators to run Gigabit speed PoE cables over long distances and then split the PoE signal into separate data and power sources in order to network non-PoE devices. Active splitters are also available in the following output voltages (5V or 12V or 18V). Save installation and equipment cost when installing 802.11n access points, (Pan/Tilt/Zoom) IP cameras and more in remote locations. No need to install network devices near a power outlet. This compact device safeguards valuable network equipment with short circuit protection and quickly creates an integrated PoE and non PoE network at Gigabit speeds.
