Your Milk Me Silly is also designed with an internal timer set to power the unit "OFF" after 30 minutes of continuous use.

CARE INSTRUCTIONS For cleaning, first unplug the unit, and then flush water in and out through the vagina and ass holes. The two holes connect, so flushing water through either hole will cleanse it properly. Do not rinse water through the backside opening, and do not submerge the masturbator completely in water. Store in a cool, dry place. Do not use oil-based lubricants with this unit, as they may cause deterioration of your TPE toy. Store separately from other toys.

CAUTION

- Do not use this unit near any water source.
- Always unplug the unit when not in use.
- Always unplug the unit when cleaning/rinsing.
- Extended use times can cause the unit to warm – this is normal.
- If the until begins to get hot, switch to a lower speed or stop use for a period of time to allow it to cool down. Allowing the unit to run too hot for an extended period of time will cause permanent damage to the product.
- Your Milk Me Silly product has been designed with a safety-stop feature to protect the rotating gears. If too much weight is applied to the internal gears for too long they will slow to a crawl and the unit will stop. Be careful not to put too much weight on the top of the product while the gyrating is active. Doing so can permanently damage the product.

NOTE: Both holes connect to the same internal canal for super easy cleaning. The walls of the tunnel are intended to be tight and stretchy and aren't very wide when you first start out. With a few uses, the elasticity will increase and should be able to accommodate most sizes.
