The diagram illustrates the installation of a 16-port RJ45 patch panel into a 19-inch rack. The process is shown in three main steps:

- Step 1:** The patch panel is slid into the rack. A red arrow labeled '1' indicates the direction of insertion.
- Step 2:** The panel is secured to the rack using screws. A red arrow labeled '2' points to the screws being inserted into the panel's mounting holes.
- Step 3:** The front door of the patch panel is closed. A red arrow labeled '3' points to the door, which is shown locking. A callout shows the door locking mechanism with a red arrow and a lock icon.

Additional details include a 'Click!' label indicating the panel is seated correctly, a callout showing the panel's dimensions (6.3 x 0.8 inches), and a callout showing the door locking mechanism.
